

Real World Risk Assessment

Modern health and safety is fundamentally based upon the assessment of risk and application of controls appropriate to that risk. A thorough understanding of the principles and their application is therefore essential for every business.

Who is this for ?

This course is suitable for managers, supervisors, and safety representatives with responsibility for conducting risk assessment or planning assessment programmes.

What you will be able to do:

On successful completion of the course candidates will understand the legal requirements for risk assessment including the factors required for a “suitable and sufficient” assessment. They will understand key concepts of hazard and risk, be able to conduct a risk assessment using the HSE five steps model. They will be able to recognise those situations where they lack the necessary competence to make a suitable assessment and what to do.

Candidates will be able to identify appropriate control measures by reference to the principles of prevention.

Candidates will also be introduced to broader concepts of risk assessment including:-

- Programme management
- Quantitative risk assessment techniques
- Enterprise risk

The course can include a concluding examination at your option. If required further training in advanced techniques can be offered, alternatively we offer consultancy support to help you plan and conduct necessary risk assessments.

Not what you need? No Problem!

TOWER can offer a range of short courses tailored to your specific requirements. Call or email to start a conversation about
